

Tenava

Tenava is a practical and sturdy locker rack designed for daycare centers and preschool spaces, featuring a variable number of locker spaces based on width. Options include two, three, or four lockers, with two upper lockers stacked, the top of which can be equipped with a door. Anchor hooks provide additional space below, and a gap in between allows for hanging longer garments. Additionally, there is a separate lower compartment for shoes or indoor slippers. The single-sided option is suitable for narrow spaces next to walls, while the double-sided option is more convenient for placement in the center of the room.
